Accurate courtroom reporting powered by your own voice!

HTH GoldenEar Voice Writing System for Court Reporters

Create records with voice recognition
Record proceedings
Easily select and playback recordings

Four CM-1000 conference microphones provide full recording coverage.

*Speak into the Sylencer stenomask to create speech-to-text documents with Dragon.*

The HTH GoldenEar Voice Writing System for Court Reporters combines the voice-recognition of Dragon NaturallySpeaking 10™, the ability to create properly formatted transcriptions through Microsoft® Word™, and a full feature conference recording system into a single, easy to use, laptop-based court reporting system.

Repeat courtroom discussion into the Sylencer™ handheld covered microphone and Dragon™ will convert your speech into text right into Word™. Playback requested sections by highlighting the section in your transcript and allow the court to hear the actual recording.

Voice Writing is a newer, efficient, and accurate way to produce court records. Voice Writing reduces the amount of necessary specialized training for new court reporters while producing truly verbatim documents with audio-recording backup.

Model # 28840

Features:

 * Create verbatim courtoom records using Dragon NaturallySpeaking 10™ and Word™.
 * Playback the actual courtroom audio at any selected point by simply selecting the section.
 * Records both the courtroom and the court reporter's voices on separate recordings for easy playback.
 * Sections of the document are automatically tagged to allow playback from any point.
 * The simple interface is intuitive and easy-to-learn.
 * Access simple 'key stroke' enabled functions with Hot Key support.
 * Supports USB foot pedals.
 * Use your Microsoft® Word™ macros and templates

A pair of Logitech S-120 amplified computer speakers provide playback capability – The court can hear the actual recorded voices of the proceedings.

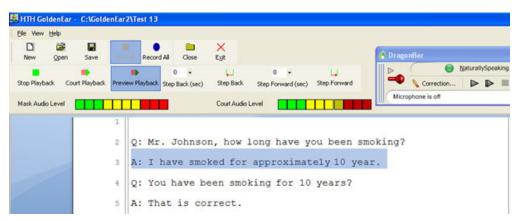

HTH GoldenEar Software
